

PREFABRICATED STRONGROOM TYPE RVV Grade V, VI, VIII-EX-CD and X-EX-CD

The picture shows Grade X-EX-CD

Description

S. Oculτος Prefabricated Strongrooms (PSR) are constructed from wall-, roof- and floor panels welded together. The panels are produced with modern production technique and constructed with a new barrier material.

The design of the PSR can easily be adopted to the conditions at site. S. Oculτος PSR is assembled in a short time and can easily be dismantled and used again.

Burglary protection

All types of PSR are certified in accordance with the European standard EN-1143-1.

Explosive test - EX - option

S. Oculτος PSR in Grade VIII and X have also passed the explosive test and are certified as EX PSR.

Core Drill test - CD - option

S. Oculτος PSR in Grade VIII and X have also passed the core drill test and are certified as CD PSR.

Ventilation

The PSR can be fitted with a reinforced ventilation passage that has been accepted by the certification institute and which will be connected to a tube $\varnothing 150$ mm.

Alarm and power supply

There are 8 conduits ($\varnothing 18$) for power supply to lighting, alarm and safe deposit lockers.

Finish

Strongroom Door - primed finish
Panels - outside, untreated finish
Panels - inside, painted with primer

Weight and measurements

See overleaf.

For design, planning and preparation before installation, please refer to special installation instructions from S. Oculτος.
